ANTIBIOTIC RESIDUE TESTING

Antibiotic residues can represent a serious problem, from potential health risks to animals and humans, or resulting in “adulterated feeds” that may require a recall. To ensure that feed products are fit for consumption, regular quality assurance checks are necessary to test for these contaminants.

SGS BROOKINGS

241 34th Avenue
Brookings SD 57006
(877) 692-7611, ext. 5

analytical.brookings@sgs.com

SGS uses the latest technology, including LC/MS/MS (liquid chromatography with tandem mass spectrometry) which is highly specific. Standards produced from reference materials allow quantification and identification of the specific antibiotics.

Our contaminant testing laboratory in Brookings, SD operates under strict quality guidelines and is ISO 17025:2005 and ISO 9001:2008 accredited and adheres to the highest industry standards.

ANTIBIOTICS TESTED:

Amoxicillin	Erythromycin	Sulfamethazine
Ampicillin	Florfenicol	Sulfathiazole
Bacitracin	Lasalocid	Sulfamonomethoxine
Ceftiofur	Lincomycin	Thiamphenicol
Chloramphenicol	Monensin	Tilmicosin
Chlortetracycline	Oxytetracycline	Tylosin
Ciprofloxacin	Penicillin G	Virginiamycin M ₁
Danofloxacin	Spiramycin
