

ANALYTICAL TESTING SERVICES

ENSURING QUALITY THROUGHOUT THE SUPPLY CHAIN

SGS North America's Agricultural laboratories have the equipment and experience necessary to service your complete food and feed testing needs. With cutting edge technology and the latest testing methods, our trained scientists provide accurate and reliable testing of grains, oilseeds, by-products, feed, vegetable oils and food. Our laboratories are ISO 17025 and ISO 9001 accredited and are approved by several feed and food organizations.

GRAINS, OILSEEDS & BY-PRODUCTS

To ensure the quality of your grains and oilseeds, you require fast and effective testing. SGS provides comprehensive grain and oilseed testing including proximate analysis, and testing for mycotoxins, contaminants and genetically modified organisms (GMOs).

VEGETABLE OILS & ANIMAL FATS

If you have quality demands related to olive, canola, soybean, peanut, cotton seed or other vegetable oils, our laboratory offers a full spectrum of testing services.

In addition, our laboratory in St. Rose, LA, specializes in authentication of olive oil and other specialty oils. Located in the largest agricultural port in the United States, this laboratory is certified by FOSFA and AOCS, and is also a NOPA Referee laboratory.

The SGS lab in Deer Park, TX, offers complete testing services for tallow and is GAFTA certified.

FEED

Our ISO 17025 accredited laboratory in Brookings, SD, specializes in testing for quality and safety of feed and ingredients.

Our complete testing services include proximate analysis, microbial testing, analysis labeling, contaminant testing (including mycotoxins, melamine, and antibiotics), pesticide residue, and GMO testing.

FOOD

Accurate testing is vital to ensure the quality and safety of your food. SGS tests the quality of vegetables, fruits, meats, and dairy products, offering a wide range of service options to meet your needs.

Using cutting edge technology, SGS tests for possible contaminants such as melamine, antibiotics and GMOs. In addition, we offer testing for nutritional labeling, pesticide residue, microbial analysis, vitamins, minerals, allergens and more.

OUTSOURCING

Whatever your industry, accessing world-class specialist skills is a vital part of ensuring your operations run smoothly. SGS outsourcing services offer unrivaled experience and expertise, innovative technologies, state-of-the art laboratories, experienced staff, and a unique global network. As a result, we can provide you with customized and innovative solutions – including sampling, testing, inspection, stock monitoring and certification – for your commodities and products, anywhere in the world.
